

The correct answers are in **bold**.

- Q1. In the Greek word root of Ecology, Oikos refers to
- household**
 - preservation
 - environment
 - study
- Q2. Ecology is the scientific study of ____ that determine the distribution and abundance of organisms. (Fill in the blanks)
- statics
 - interactions**
 - dynamics
 - habitat
- Q3. In the Greek word root of Ecology, logos refers to
- household
 - preservation
 - environment
 - study**
- Q4. Ecology is the scientific study of interactions among organisms and their _____. (Fill in the blanks)
- habitat
 - niche
 - environment**
 - population
- Q5. "Enquiry into plants" is a book written by
- Theophrastus**
 - Linnaeus
 - Malthus
 - Humboldt
- Q6. Who amongst these is considered the father of Biogeography?
- Theophrastus
 - Linnaeus
 - Malthus
 - Humboldt**
- Q7. Which of these is not a characteristic of fitness?
- Fitness is environment-specific.
 - Fitness is species-specific.
 - Higher reproductive rate means higher fitness.**
 - Fitness should be measured across several generations.
- Q8. Which of these is not a step in natural selection?
- variation
 - underpopulation**
 - struggle for existence
 - survival of the fittest
- Q9. Which of these is not a characteristic of fitness?
- Fitness is environment-specific.
 - Fitness is species-specific.
 - Fitness works on traits such as size and speed.**
 - Fitness should be measured across several generations.
- Q10. Which of these is not a kind of selection
- directional
 - stochastic**
 - disruptive
 - stabilising

The correct answers are in **bold**.

S. No.	Question
1	"groups of actually or potentially interbreeding natural populations, which are reproductively isolated from other such groups" is a definition of a. cells b. species c. ecosystems d. biomes
2	"the diversity that exists among different geographies" is a. alpha (α) biodiversity b. beta (β) biodiversity c. gamma (γ) biodiversity d. delta (δ) biodiversity
3	The emergent principle can be stated as a. Whole = sum of parts b. Whole < sum of parts c. Whole > sum of parts d. None of these
4	The mitochondrion is a / an a. Sub-cellular organelle b. Cell c. Tissue d. Organ
5	"the diversity that exists within an ecosystem" is a. alpha (α) biodiversity b. beta (β) biodiversity c. gamma (γ) biodiversity d. delta (δ) biodiversity
6	Hierarchy emerges almost inevitably through a wide variety of evolutionary processes, for the simple reason that hierarchical structures are ____ (Fill in the blank) a. perfect b. imperfect c. stable d. unstable
7	The laboratory approach to Ecology uses a. equations b. models c. observations d. experiments
8	For more biodiversity, the level of disturbance should be a. less b. intermediate c. more d. none of these
9	The hierarchical system was given by a. Simon b. Watson c. Hutchinson d. Humboldt
10	There is more biodiversity in areas with a. less competition, less predation b. less competition, more predation c. more competition, more predation d. more competition, less predation

The correct answers are in **bold**.

S. No.	Question
1	Hamilton's rule can be stated as a. $rB < C$ b. $rB > C$ c. $rB = C$ d. $rB + C = 0$
2	The scientific study of animal behaviour is called a. behaviourism b. ecology c. ethology d. prey-predator dynamics
3	Harmonious interactions occur where a. at least one participant is benefited b. at least one participant is unharmed c. both participants are benefitted d. both participants are unharmed
4	An inventory of behaviours exhibited by an animal during a behaviour exercise is called a. ecogram b. ethogram c. behaviourogram d. animalogram
5	I observe a bird take a tick out of another bird's head and eat it. In the social context, this behaviour would be called a. tick hunting b. auto grooming c. allo grooming d. foraging
6	Trampling of grass due to the movement of animals is an example of a. mutualism b. amensalism c. commensalism d. proto cooperation
7	Birds on giraffe are an example of a. colony b. commensalism c. proto cooperation d. allelopathy
8	I observe a monkey take a tick out of another monkey's head and eat it. In the social context, this behaviour would be called a. tick hunting b. auto grooming c. allo grooming d. foraging
9	The interaction between exotic shrubs and trees through the action of seed predators is an example of a. intraspecific competition b. apparent competition c. disguised competition d. harmonious competition
10	Egrets with buffaloes are an example of a. colony b. commensalism c. proto cooperation d. allelopathy

The correct answer is in **bold**.

S. No.	Question
1	Net primary productivity is given by a. APAR × LUE b. APAR + LUE c. APAR - LUE d. APAR / LUE
2	Consider the food chain: Grass → Grasshopper → Frog → Snake → Hawk. In this food chain, a. hawk is producer b. hawk is consumer and carnivore c. hawk is consumer and herbivore d. hawk is decomposer
3	Glacial lakes are typical examples of a. eutrophic lakes b. hypereutrophic lakes c. oligotrophic lakes d. mesotrophic lakes
4	Tree → Frugivorous birds → Hawk represents a. upright pyramid of numbers b. inverted pyramid of numbers c. spindle pyramid of numbers d. dumb-bell pyramid of numbers
5	Consider the food chain: Grass → Grasshopper → Frog → Snake → Hawk. In this food chain, a. frog is producer b. frog is consumer and carnivore c. frog is consumer and herbivore d. frog is decomposer
6	If we all became vegetarians, we'll be able to support our large populations. This can be explained through a. 10% rule b. 1% rule c. trophic cascade d. biodiversity
7	Consider the food chain: Grass → Grasshopper → Frog → Snake → Hawk. In this food chain, a. more number of hawks than grasshoppers can be supported b. more number of grasshoppers than hawks can be supported c. equal number of hawks and grasshoppers can be supported d. none of these
8	At the compensation point, a. photosynthesis = respiration b. photosynthesis < respiration c. photosynthesis > respiration d. photosynthesis = 0
9	Trees → Birds → Parasites → Hyperparasites represents a. upright pyramid of numbers b. inverted pyramid of numbers c. spindle pyramid of numbers d. dumb-bell pyramid of numbers
10	Consider the food chain: Grass → Grasshopper → Frog → Snake → Hawk. As we move up the food chain, a. available energy decreases b. available energy increases c. available energy remains same d. available energy is zero everywhere

The correct answer is in **bold**.

S. No.	Question
1	Which of these is not a measure of absolute population density? a. total count b. pelt count c. capture-recapture method d. removal method
2	Pan traps are used for sampling a. bees b. butterflies c. non-pollinator insects d. pollinator insects
3	___ is how close the measured values are to the correct value. a. Accuracy b. Precision c. Bias d. Variance
4	The juvenile mortality rate is the annual number of deaths of juveniles per a. 100 births b. 1000 births c. 100 live births d. 1000 live births
5	___ employs a simple rule of selecting every kth unit starting with a number chosen at random from 1 to k as the random start. a. Simple random sampling b. Systematic sampling c. Stratified sampling d. Multistage sampling
6	A sampling procedure such that each possible combination of sampling units out of the population has the same chance of being selected is referred to as a. Simple random sampling b. Systematic sampling c. Stratified sampling d. Multistage sampling
7	The logistic growth equation, when plotted, appears a. I shaped b. J shaped c. S shaped d. O shaped
8	The minimum replacement level fertility for a population to grow should be greater than a. 1 b. 2 c. 3 d. 4
9	Which of these is true? a. Physiological longevity > Ecological longevity b. Physiological longevity = Ecological longevity c. Physiological longevity < Ecological longevity d. a or b
10	Cover board surveys are typically used for sampling a. herpetofauna b. fishes c. large mammals d. carnivores

The correct answers are in **bold**.

S. No.	Question
1	A climax caused by wildfires is an example of a. climatic climax b. edaphic climax c. disclimax d. catastrophic climax
2	Importance value can be written as a. Relative density + Relative frequency X Relative dominance b. Relative density X Relative frequency + Relative dominance c. Relative density + Relative frequency + Relative dominance d. Relative density X Relative frequency X Relative dominance
3	When compared to generalist species, specialist species have a. narrower niches b. broader niches c. same-size niches d. none of these
4	Lithosere is an example of a. hydrosere b. xerosere c. psammosere d. halosere
5	Importance value varies from a. 0 to 10 b. 0 to 50 c. 0 to 100 d. 0 to 300
6	The climax near Tindni village is being controlled by disturbance by cattle. This is an example of a. climatic climax b. edaphic climax c. disclimax d. catastrophic climax
7	Which of these depicts correctly the lithosere primary succession? a. Rock → Crustose lichen → Foliose lichen → Moss → Herbaceous stage → Shrub → Woodland → Climax b. Rock → Foliose lichen → Crustose lichen → Moss → Herbaceous stage → Shrub → Woodland → Climax c. Moss → Crustose lichen → Foliose lichen → Rock → Herbaceous stage → Shrub → Woodland → Climax d. Rock → Crustose lichen → Foliose lichen → Shrub → Herbaceous stage → Moss → Woodland → Climax
8	Which of these is correct? a. Fundamental niche > Realised niche b. Fundamental niche = Realised niche c. Fundamental niche < Realised niche d. a or b
9	A species found most frequently in a particular community, but also present occasionally in others is called a. accidental species b. indifferent species c. selective species d. exclusive species
10	Which of these is not a characteristic of pioneer species a. ability to grow on bare rocks b. ability to tolerate extreme temperatures c. large size d. short life span

The correct answers are in **bold**.

S. No.	Question
1	"Quick movement over large distances, often across unsuitable terrain" is a description of a. diffusion b. secular dispersal c. jump dispersal d. drifting
2	Transplantation experiments are used to find a. potential range b. effective range c. actual range d. economic range
3	Good climate is a a. chemical factor b. demographic factor c. push factor d. pull factor
4	The movement of lions across the Gir landscape is an example of a. diffusion b. secular dispersal c. jump dispersal d. drifting
5	"The geographical distribution of a species will be controlled by that environmental factor for which the organism has the narrowest range of tolerance." This is the statement for a. Liebig's law of the minimum b. Liebig's law of the maximum c. Shelford's law of tolerance d. Shelford's law of intolerance
6	The regular, seasonal movement of animals, often along fixed routes is called a. translocation b. migration c. dispersal d. drifting
7	Scarcity of food is a a. chemical factor b. demographic factor c. push factor d. pull factor
8	I tried growing vegetables under my teak plantation, but the vegetable plants died out. I should be concerned about a. autophagy b. allelophagy c. autopathy d. allelopathy
9	Which of these is not a physical factor of habitat? a. soil b. moisture c. predators d. temperature
10	"The rate of any biological process is limited by that factor in least amount relative to requirement, so there is a single limiting factor." This is the statement for a. Liebig's law of the minimum b. Liebig's law of the maximum c. Shelford's law of tolerance d. Shelford's law of intolerance
11	The movement of individuals away from their place of birth or hatching or seed production into a new habitat or area to survive and reproduce is called a. translocation b. migration c. dispersal d. drifting

The correct answers are in **bold**.

S. No.	Question
1	Which of these is a stochastic factor? a. birth rate b. death rate c. population structure d. environmental fluctuation
2	We prefer those areas for the creation of a conservation reserve where the level of threat is a. very high b. medium c. very low d. non-existent
3	According to Leopold, which of these is not a tool of habitat management? a. fire b. gun c. cattle d. sickle
4	Captive breeding is an example of a. in-situ conservation b. ex-situ conservation c. in-situ preservation d. ex-situ preservation
5	The acronym HIPPO does not include a. habitat loss b. invasive species c. pollination d. pollution
6	The “subset of physical and biotic environmental factors that permit an animal (or plant) to survive and reproduce” is the definition of a. habitat b. ecosystem c. biome d. biosphere
7	The acronym HIPPO does not include a. habitat loss b. habitat enhancement c. invasive species d. human over-population
8	Which of these correctly represents the process of habitat fragmentation and loss? a. Original forest → Dissection → Perforation → Fragmentation → Attrition b. Original forest → Dissection → Attrition → Fragmentation → Perforation c. Original forest → Dissection → Perforation → Attrition → Fragmentation d. Original forest → Dissection → Fragmentation → Perforation → Attrition
9	Which of these is a deterministic factor? a. environmental variation b. forest fire c. death rate d. diseases
10	Zoo is an example of a. in-situ conservation b. ex-situ conservation c. in-situ preservation d. ex-situ preservation

S. No.	Question
1	Which of these is not a climatic forcing for Earth? a. changes in plate tectonics b. changes in Earth's orbit c. changes in Moon's orbit d. changes in Sun's strength
2	"Any changes in natural or human systems that inadvertently increase vulnerability to climatic stimuli; an adaptation that does not succeed in reducing vulnerability but increases it instead" is a definition for a. adaptation b. mitigation c. maladaptation d. malmitigation
3	Macrodebris in the context of plastic debris has fragments of size a. > 20 mm b. 5 - 20 mm c. < 5 mm d. < 1 mm
4	"The ability of a system to adjust to climate change (including climate variability and extremes) to moderate potential damages, to take advantage of opportunities, or to cope with the consequences" is a definition for a. adaptive response b. adaptive capacity c. mitigative response d. mitigative capacity
5	The government came up with a regulation that incandescent bulbs be replaced by LED bulbs, so that electricity consumption and release of carbon dioxide from power plants is reduced. In the context of climate change, such an action would be called a. adaptation b. mitigation c. deceleration d. maladaptation
6	Mesodebris in the context of plastic debris has fragments of size a. > 20 mm b. 5 - 20 mm c. < 5 mm d. < 1 mm
7	Which of these is not a climatic forcing for Earth? a. changes in plate tectonics b. changes in Earth's orbit c. changes in Sun's orbit d. changes in Sun's strength
8	Because of climate change, Mudumalai Tiger Reserve is suffering from frequent droughts. The management has built several artificial water holes for animals, and fills them up regularly with tankers. In the context of climate change, such an action would be called a. adaptation b. mitigation c. deceleration d. maladaptation
9	Which of these is not a principle of ecological restoration? a. ecological integrity b. long-term sustainability c. benefits and engages scientists d. informed by past and future
10	Which of these is not a principle of ecological restoration? a. ecological integrity b. short-term sustainability c. benefits and engages society d. informed by past and future
